Two reports prepared by CATA (Covid Airborne Transmission Alliance) were submitted to the UK Covid-19 Inquiry:

- '**Changes in the Management of COVID-19 : March 2020**'
  - Discusses the background to the downgrade in respiratory protection and the declassification of COVID-19 from a High Consequence Infectious Disease (HCID) which occurred on 13 March 2020
- '**An Independent Investigation into the conduct of the '4-Nations IPC Cell**'
  - Discusses the preparation and publication of Infection Prevention and Control Guidance
  - Also considers the involvement of other organisations (ARHAI, Public Health bodies, HSE etc)

Some content of these reports has had to be redacted since they rely, to a certain extent, on documents that are confidential to the Inquiry and have not been authorised by the Chair, Baroness Hallett, for release into the public domain.

Other information, which has been obtained from other sources such as Freedom of Information requests provides insight into one of the most important aspects of the UK's handling of the pandemic, namely the failure to properly protect doctors, nurses and other healthcare workers against the disease.

CATA was a Core Participant at Module 3 of the Inquiry (Impact of COVID-19 on healthcare) representing over 65,000 healthcare professionals from the following bodies:

- Association for Respiratory Technology & Physiology
- British Association for Parenteral & Enteral Nutrition
- British and Irish Association of Stroke Physicians
- British Dietetic Association
- British Occupational Hygiene Society
- British Society of Gastroenterology
- College of Paramedics
- Doctors Association UK
- National Nurses Nutrition Group
- Patient Safety Learning
- Queens Nursing Institute
- Royal College of Speech and Language Therapists

CATA was also supported by a number of individuals who brought specialist expertise and lived experience to the team.
